Leaky pipeline - % women by career stage

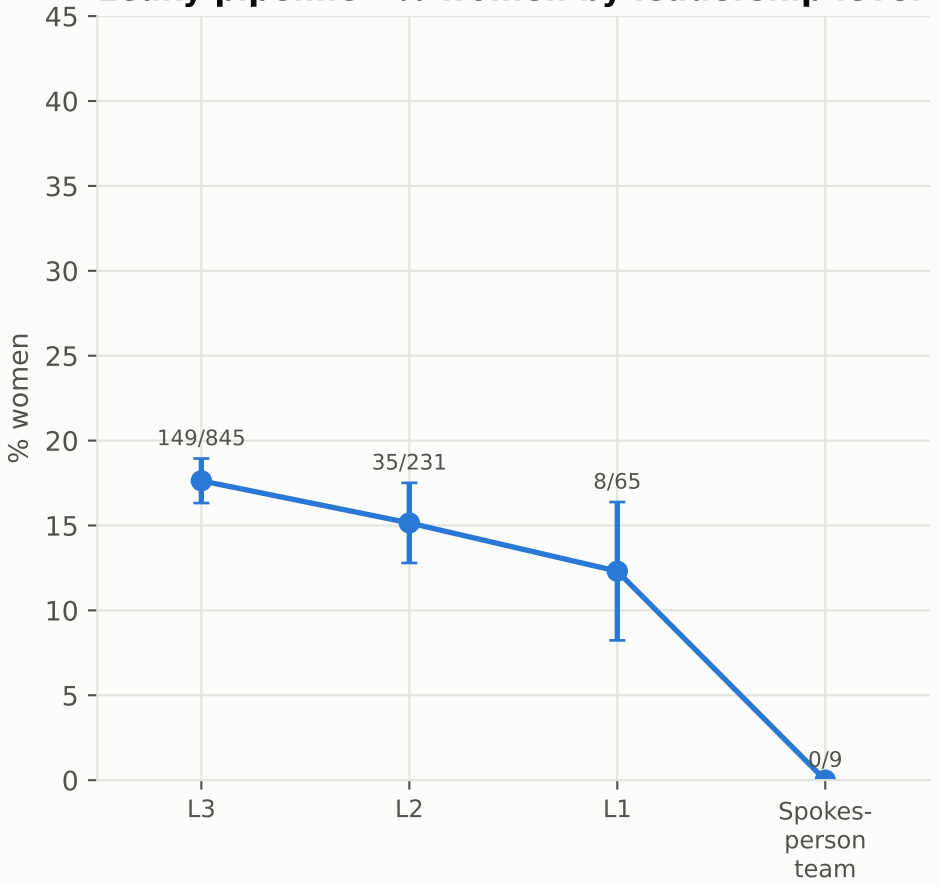

Region of home institute by career stage

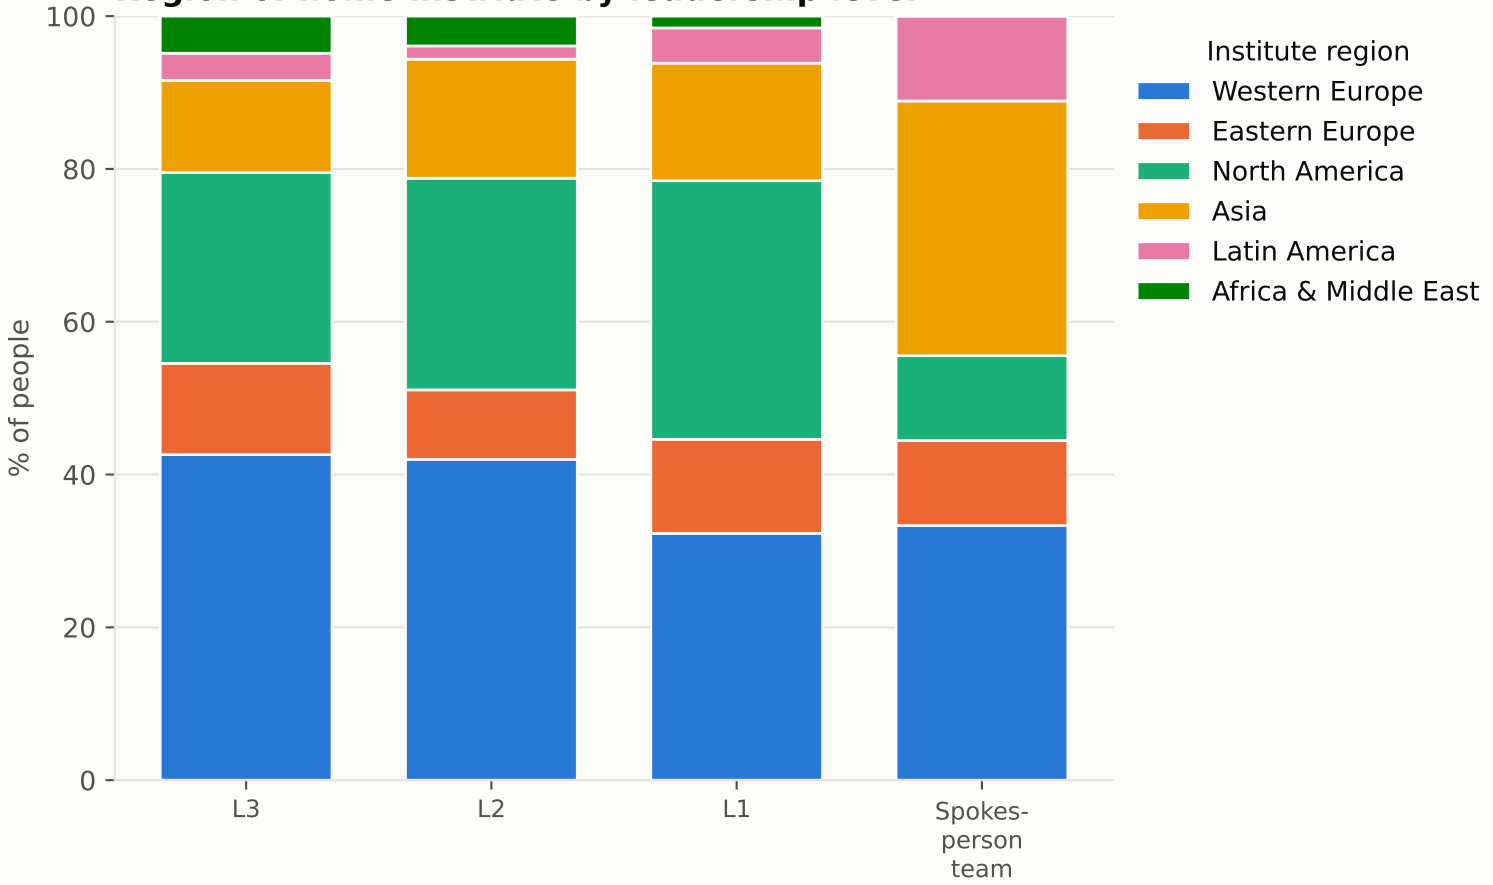

Distinct people active 2022-2026. Error bars: binomial 1σ. Labels: women / total (absolute counts). Career stage from contract type (non-permanent / permanent).

FAKE DATA - illustration only

Leaky pipeline - % women by leadership level

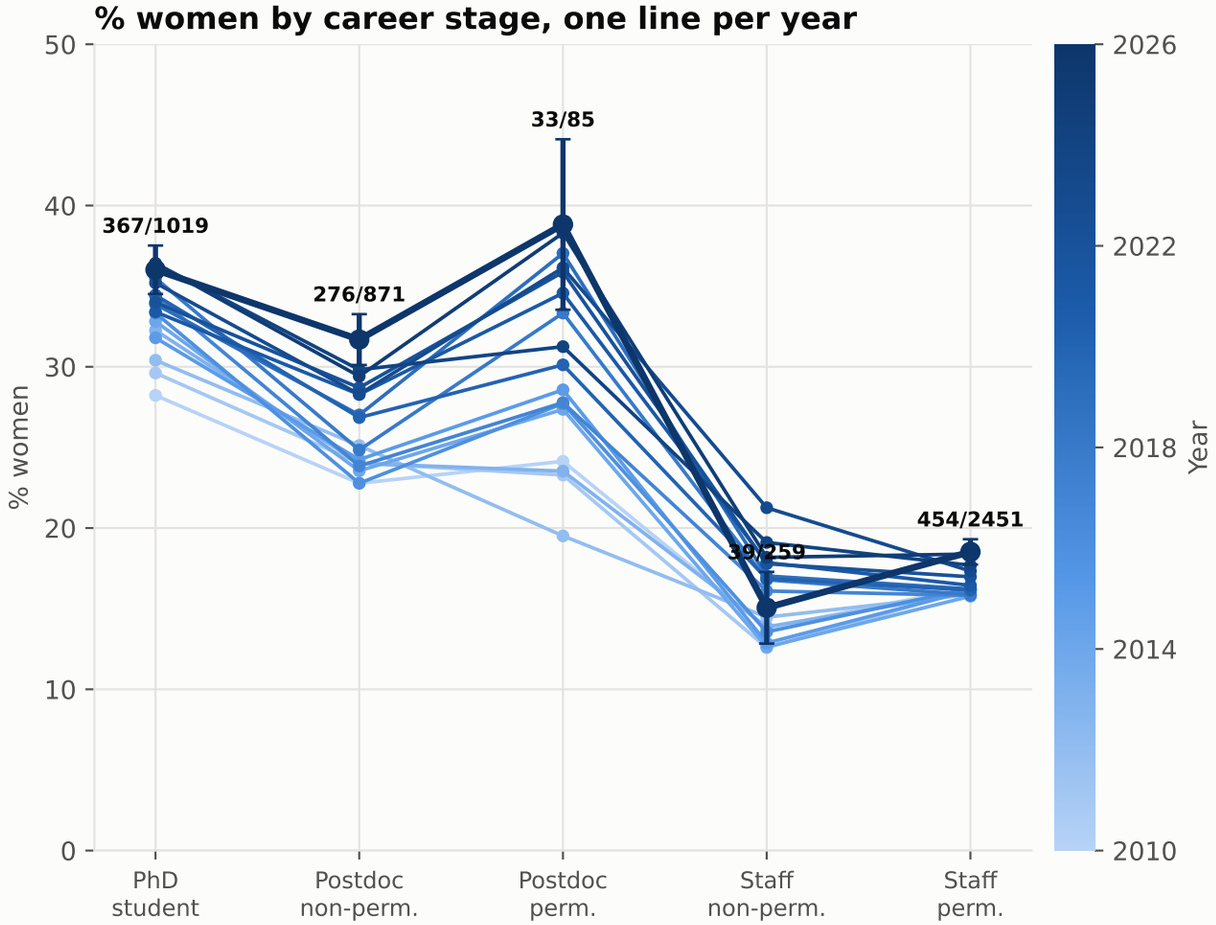

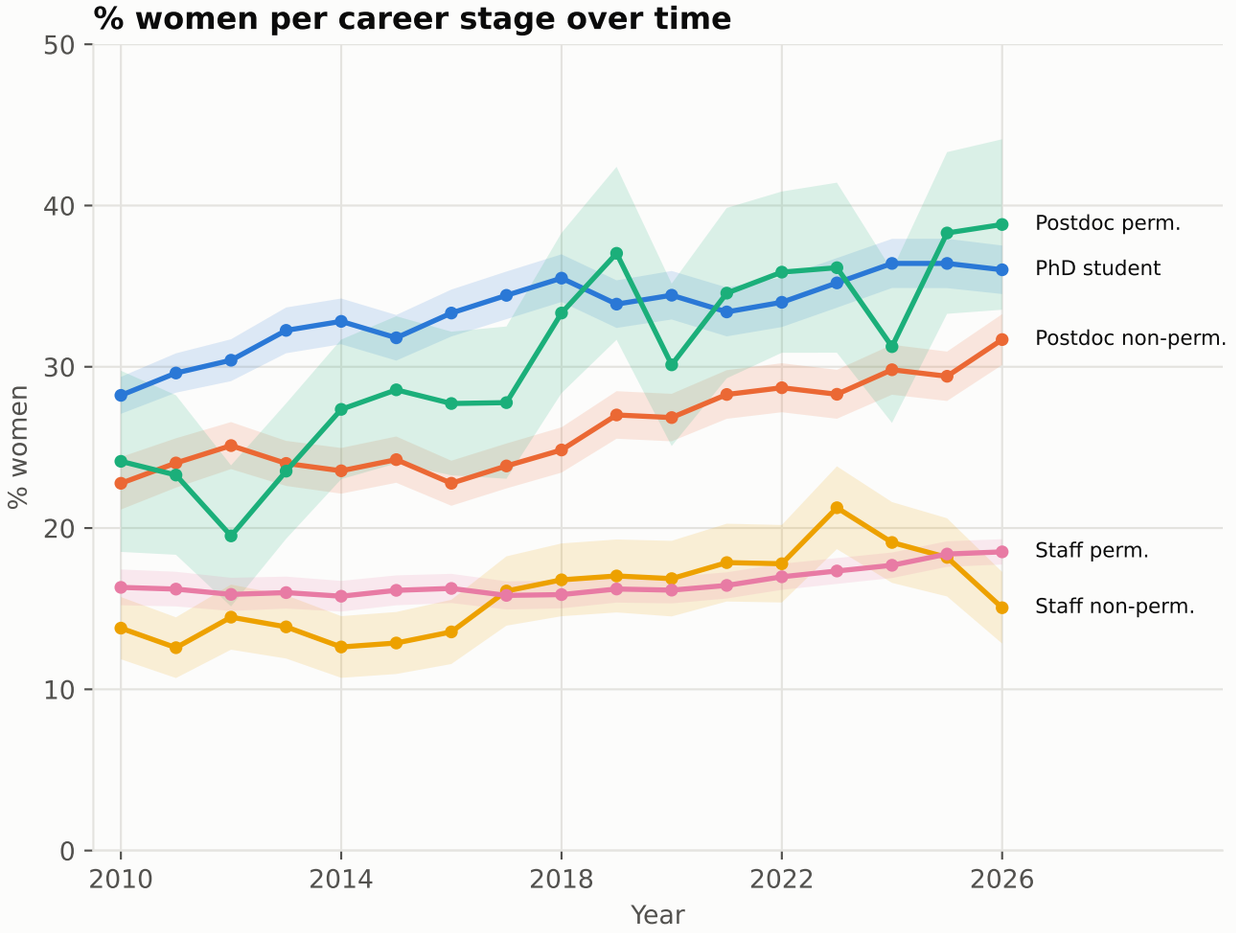

Region of home institute by leadership level

Distinct people active 2022-2026. Error bars: binomial 1σ. Labels: women / total (absolute counts). Anyone holding the role in the window, whatever their career stage.

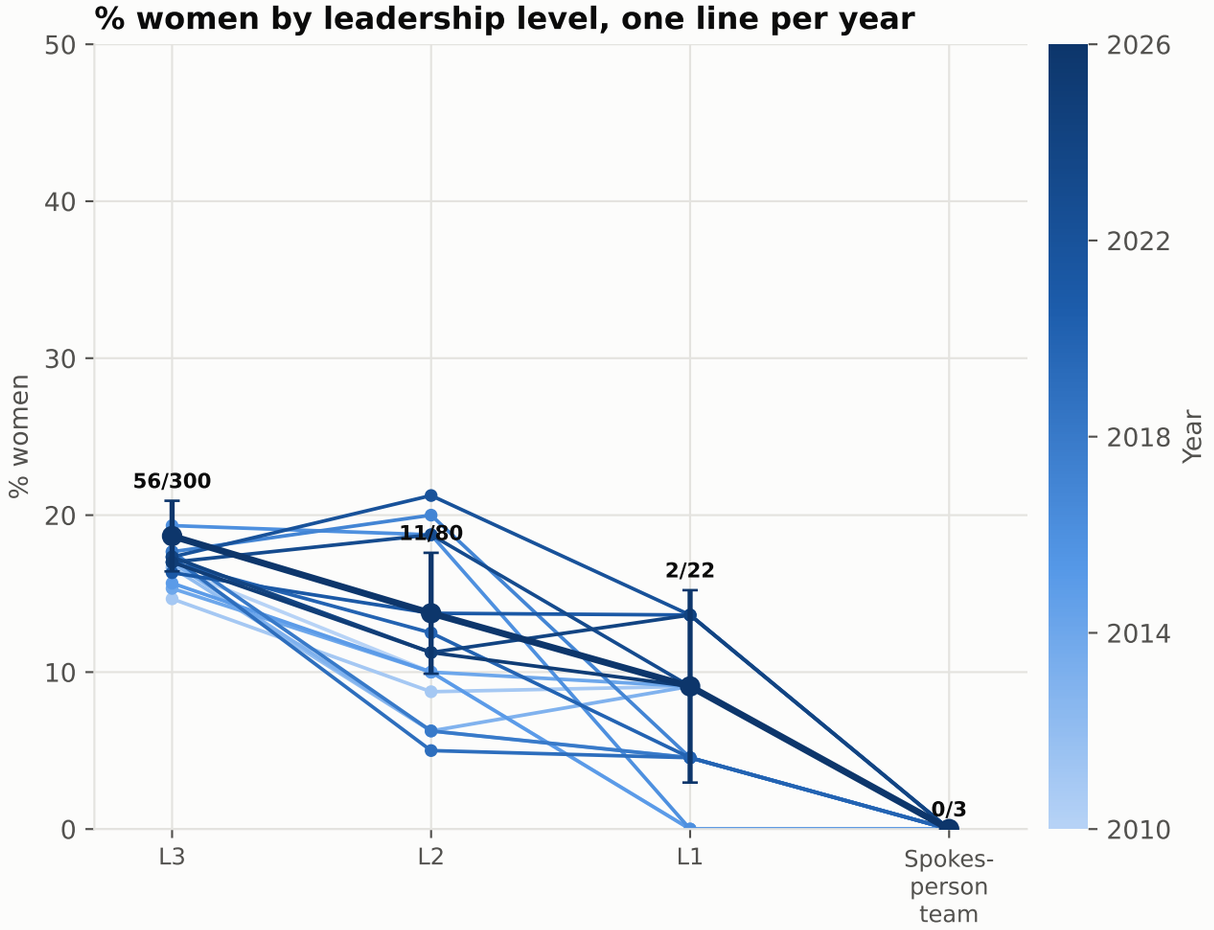

FAKE DATA - illustration only

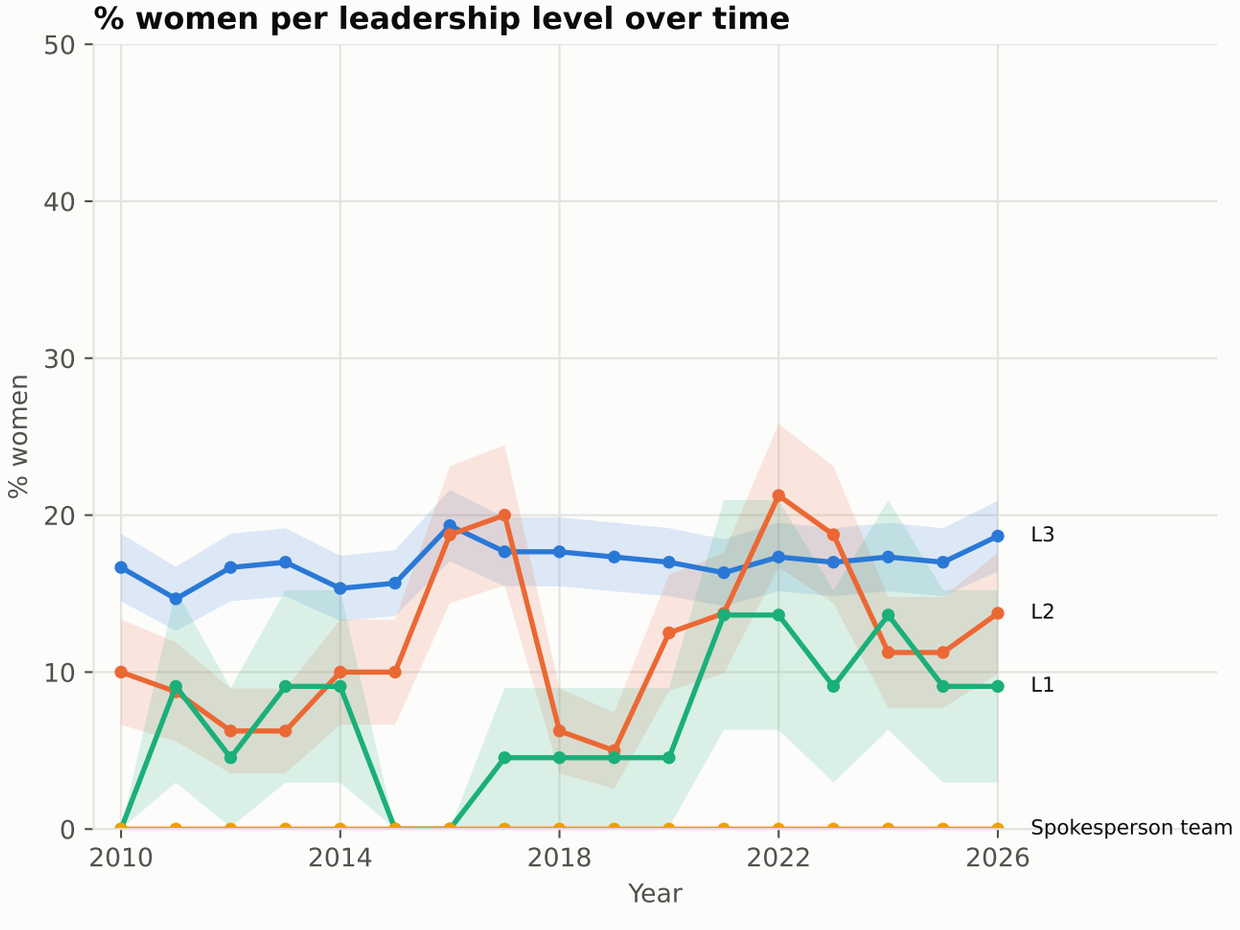

Snapshot per year: distinct people active in that year. Latest year (2026) highlighted with binomial 1σ error bars and women / total; bands on the right = 1σ.

FAKE DATA - illustration only

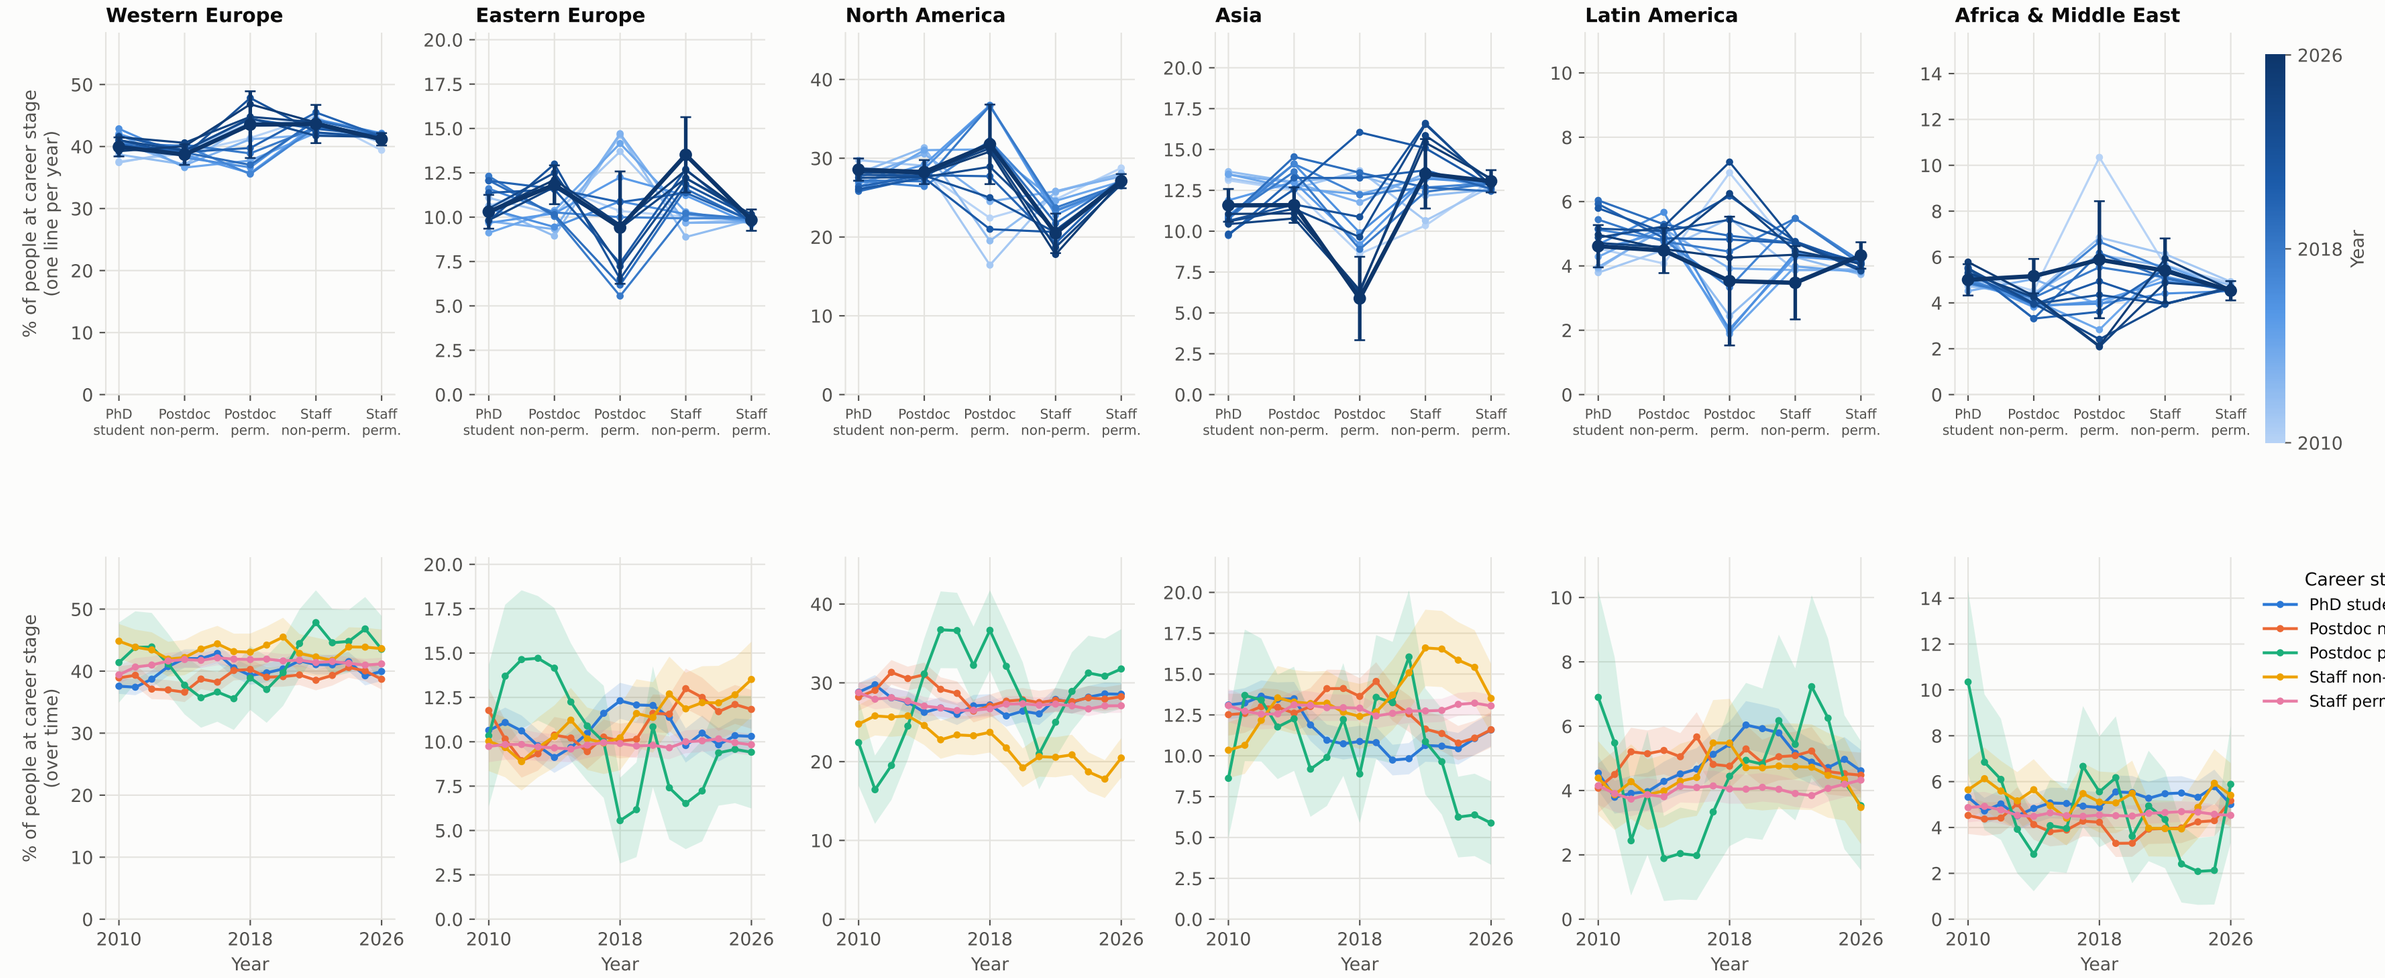

Snapshot per year: distinct people active in that year. Latest year (2026) highlighted with binomial 1σ error bars and women / total; bands on the right = 1σ.

FAKE DATA - illustration only

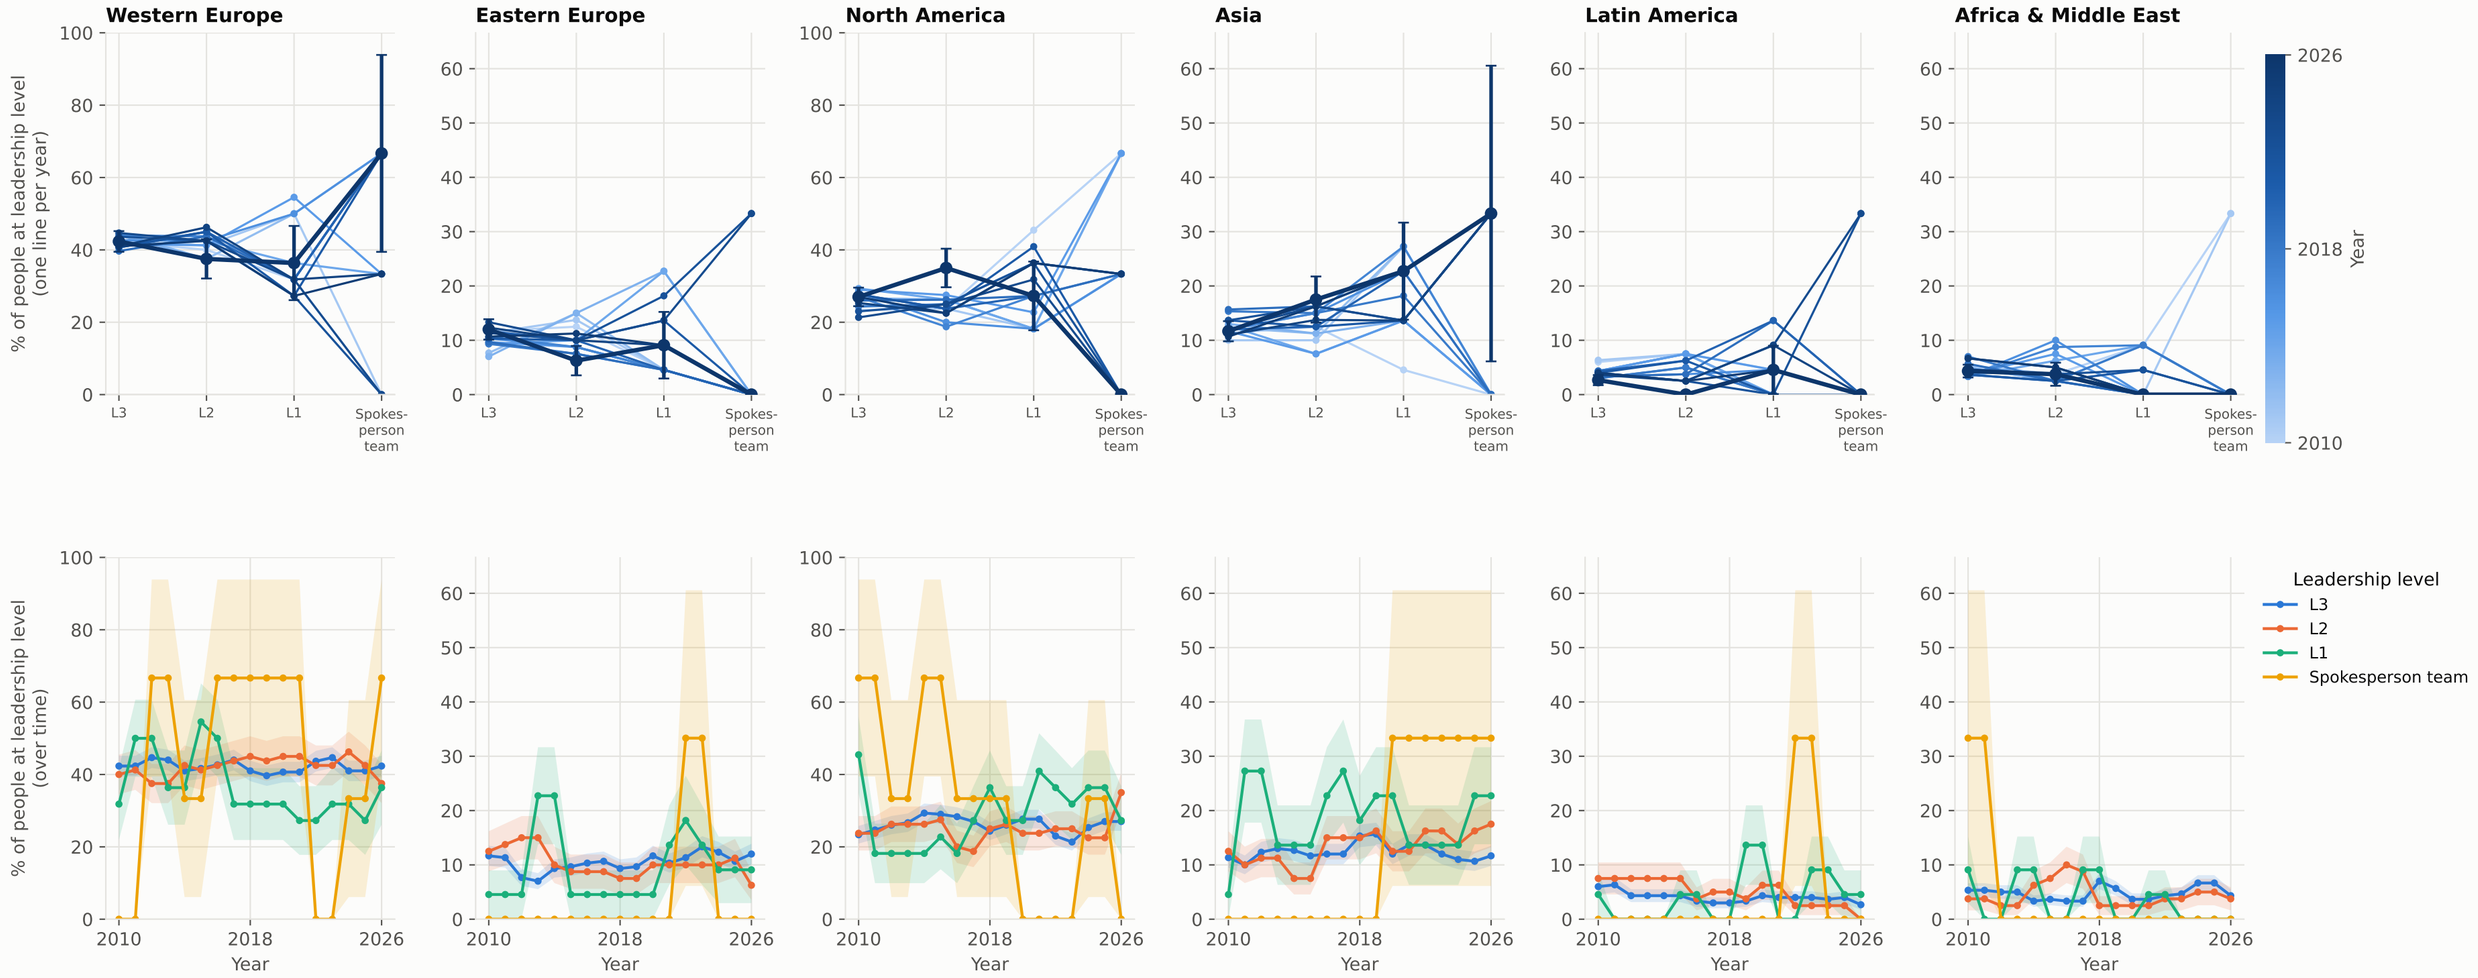

Region of home institute by career stage, year by year

% = people from the region ÷ all people at that career stage in the year. Each region has its own y-scale. Top: latest year (2026) with binomial 1σ error bars. Bottom: bands = 1σ.

FAKE DATA - illustration only

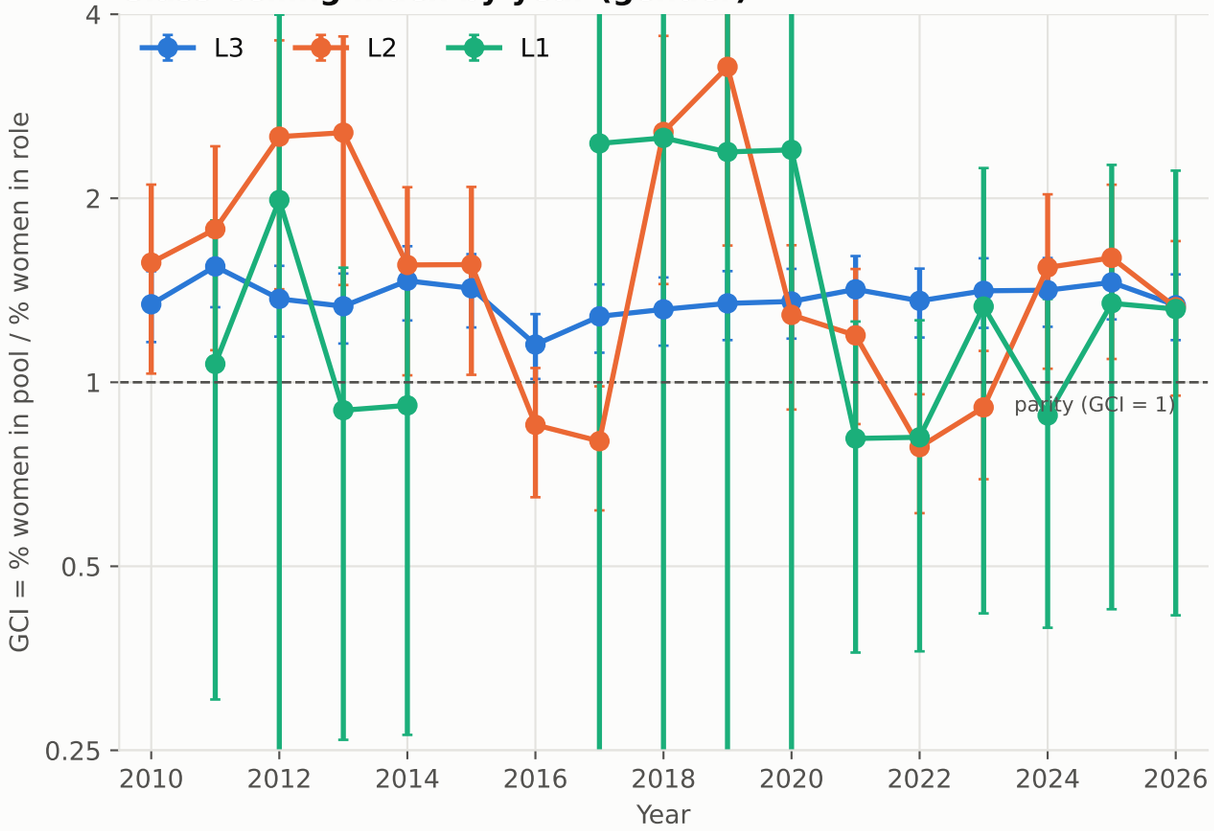

Region of home institute by leadership level, year by year

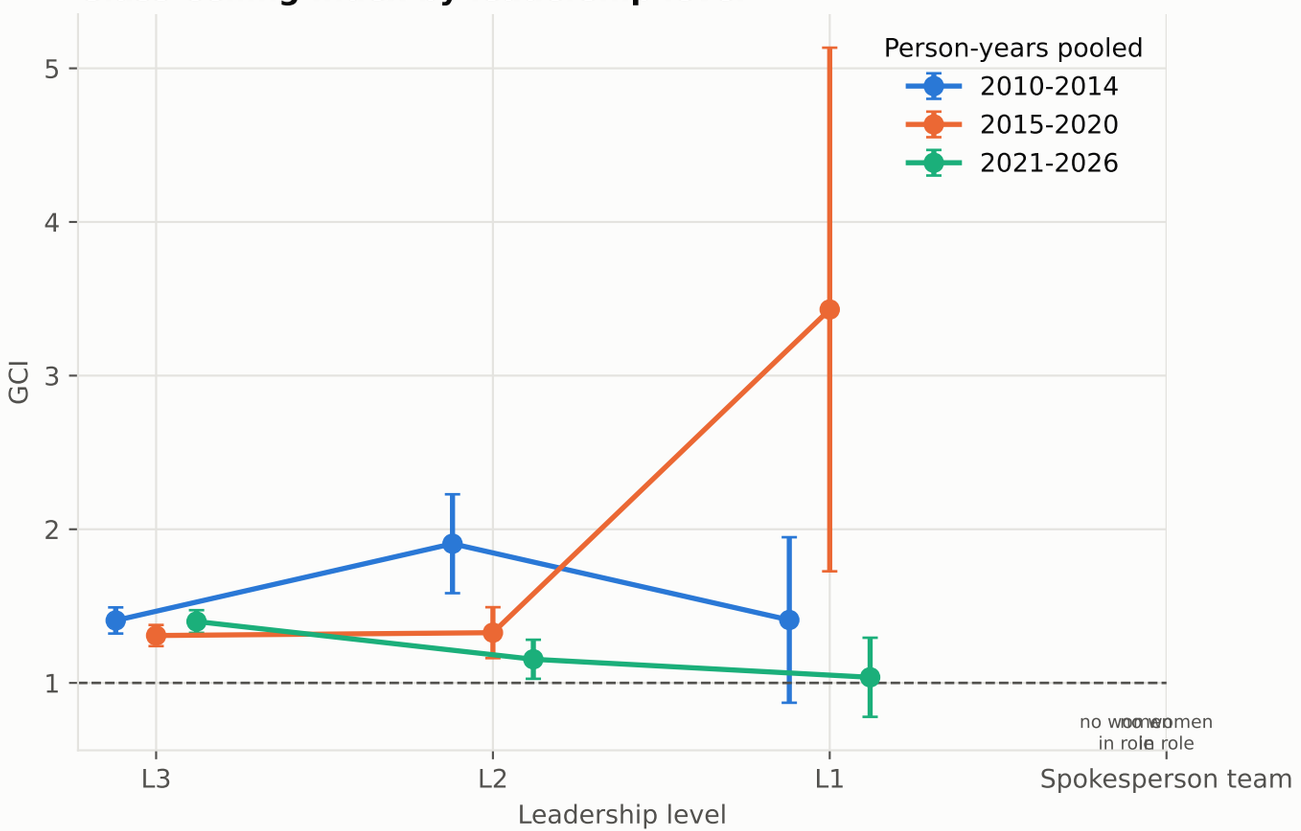

% = people from the region ÷ all people at that leadership level in the year. Each region has its own y-scale. Top: latest year (2026) with binomial 1σ error bars. Bottom: bands = 1σ.

FAKE DATA - illustration only

Glass Ceiling Index by year (gender)

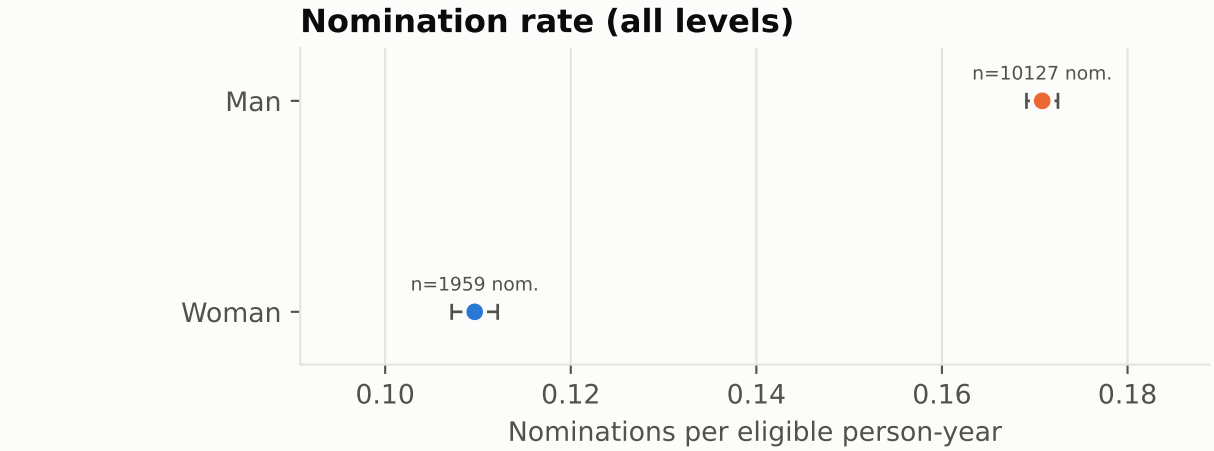

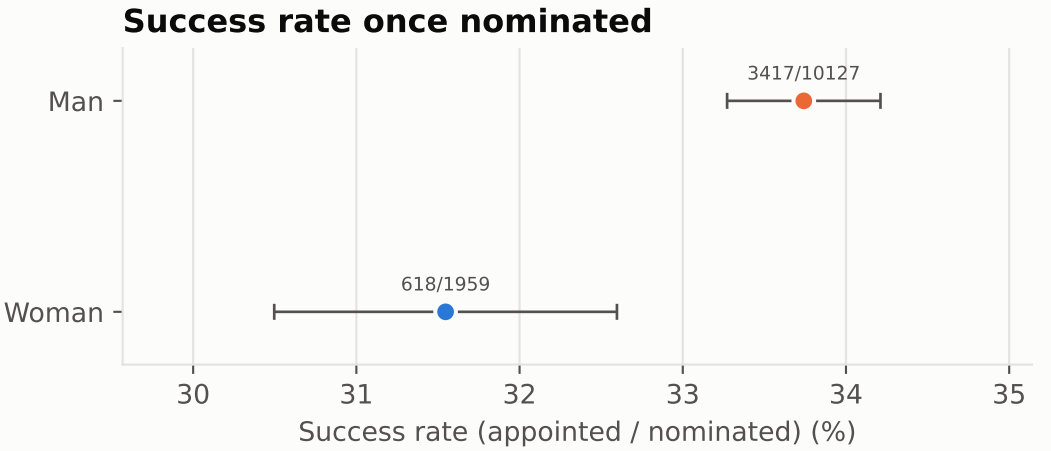

Glass Ceiling Index by leadership level

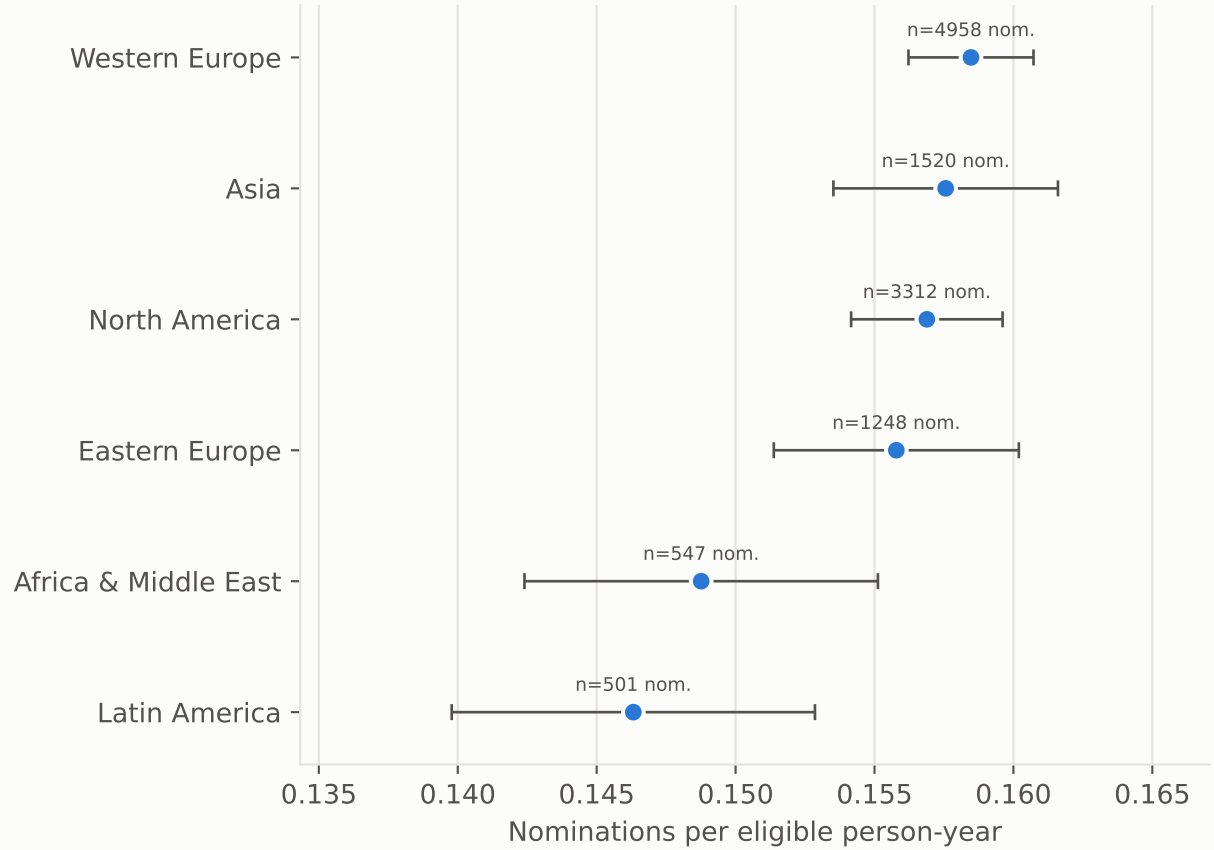

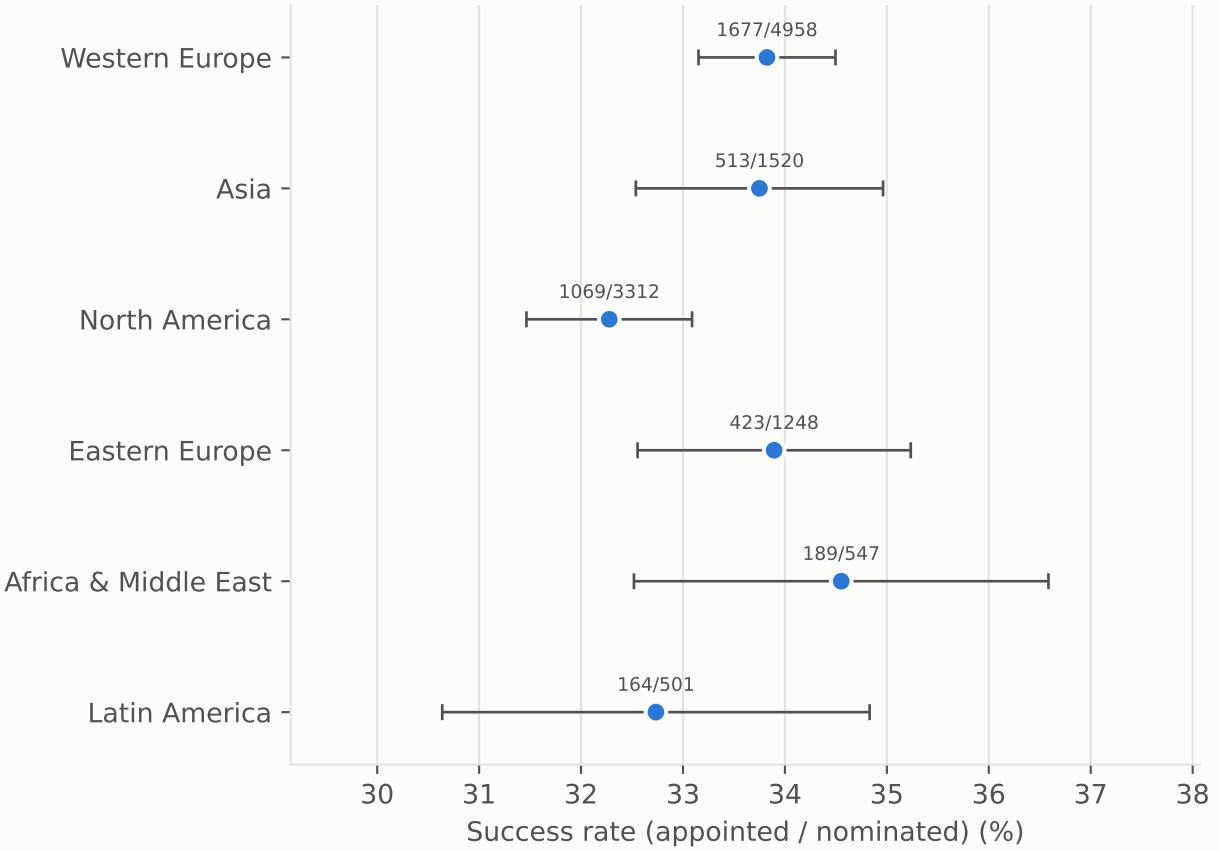

GCI > 1: women under-represented in the role vs the eligible pool. Error bars: 1σ (log-ratio).
Pools: L3 = all members (no formal criteria). Placeholders: L2 = ex-L3 or staff PhD+8y; L1 = ex-L2; SP team = ex-L1.

FAKE DATA - illustration only

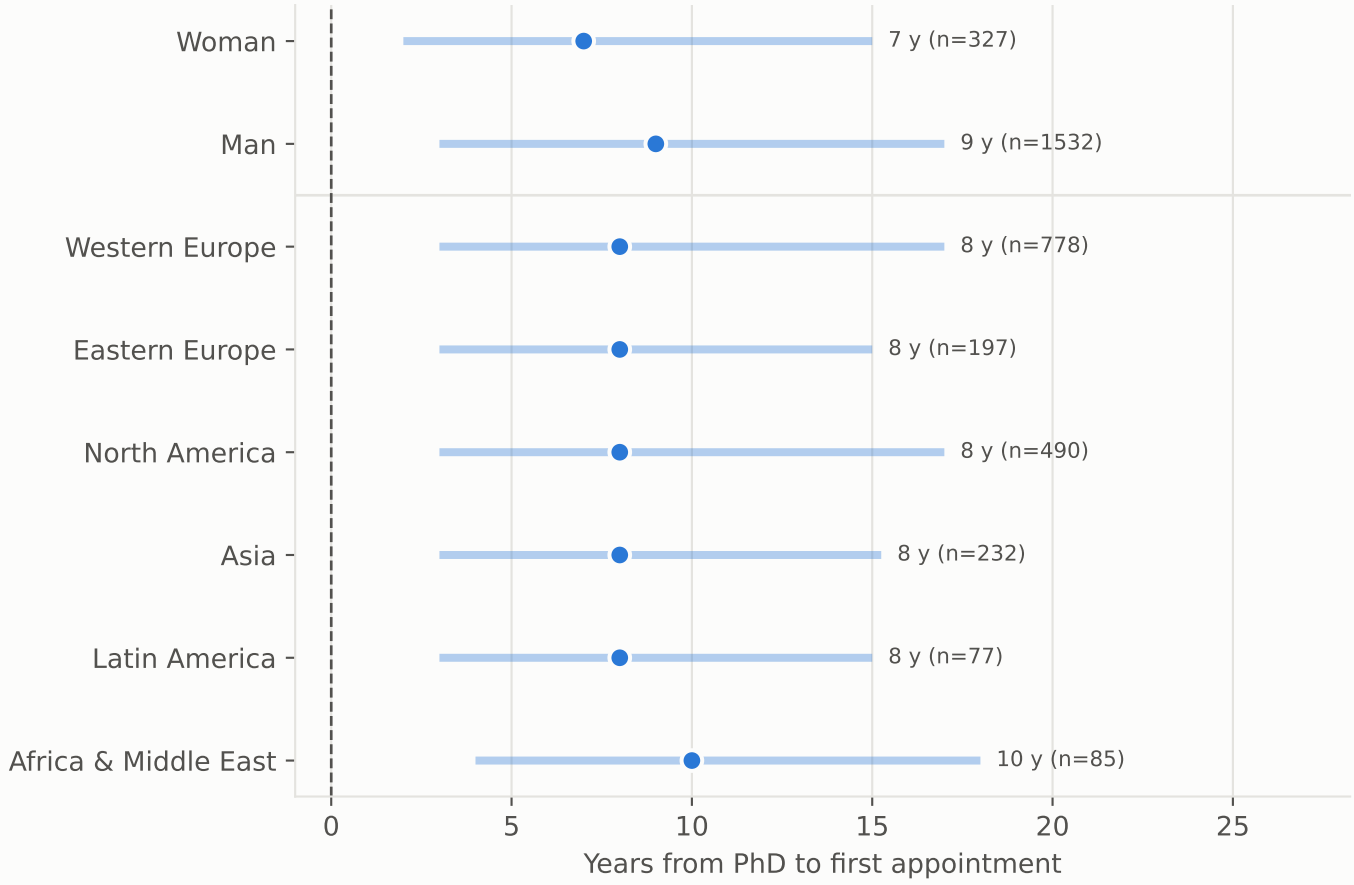

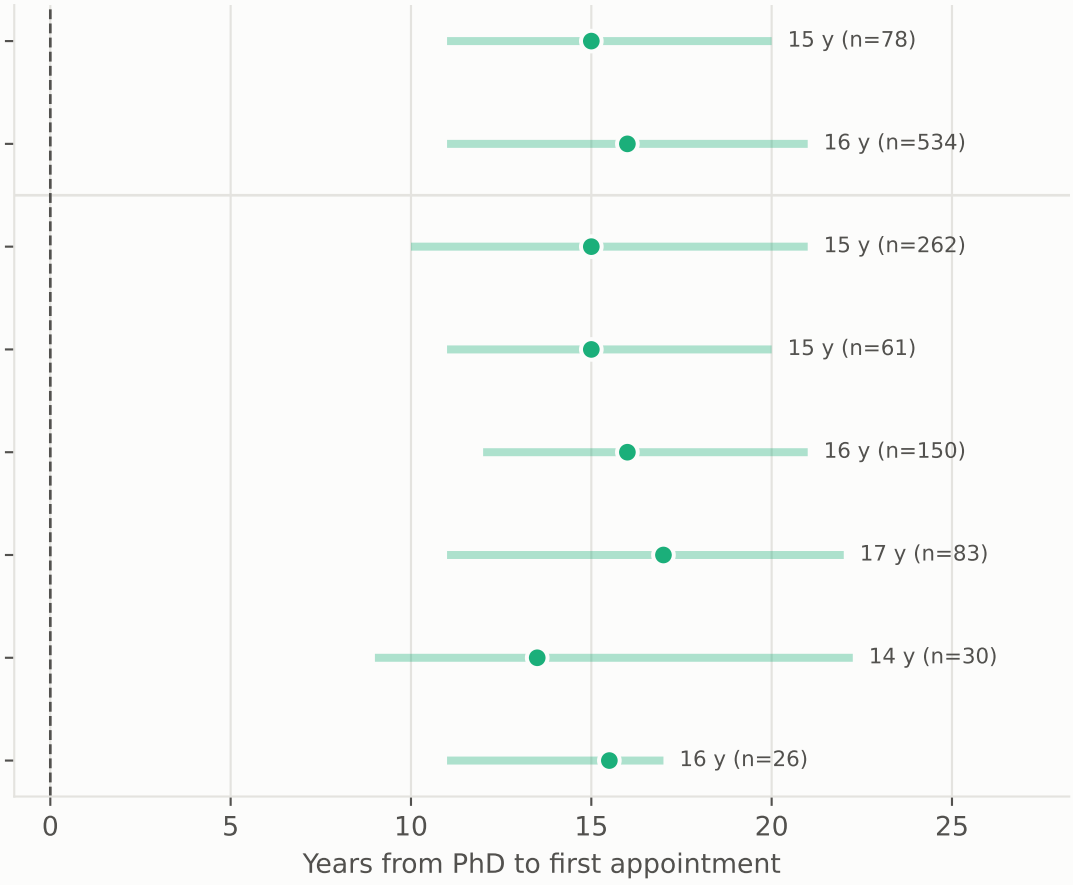

All leadership nominations 2008-2026, normalised to person-years of all members (L3 pool). Error bars: Poisson (nominations) / binomial (success), 1σ. Labels: absolute counts.

FAKE DATA - illustration only

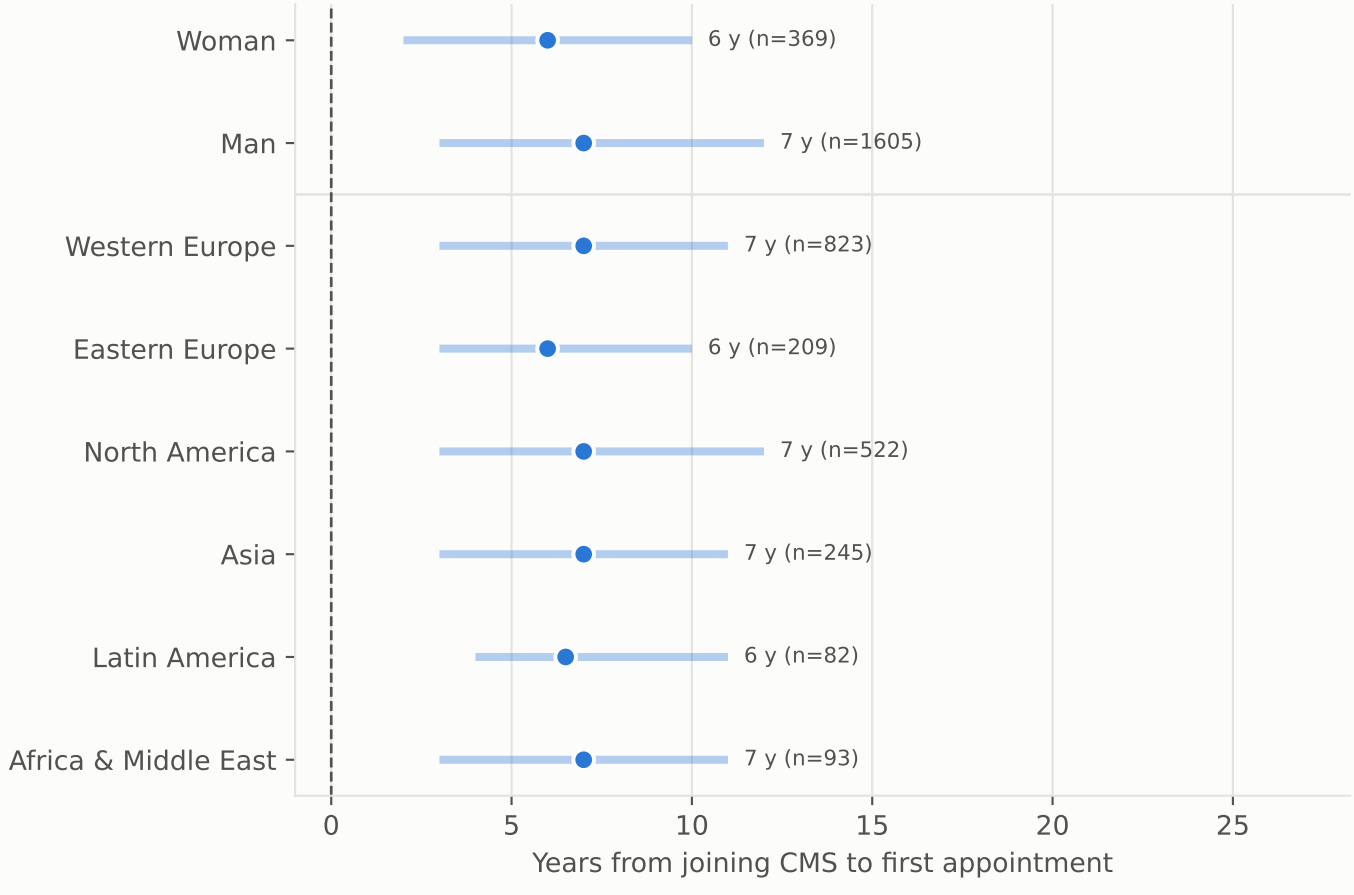

First L3 role - years since PhD

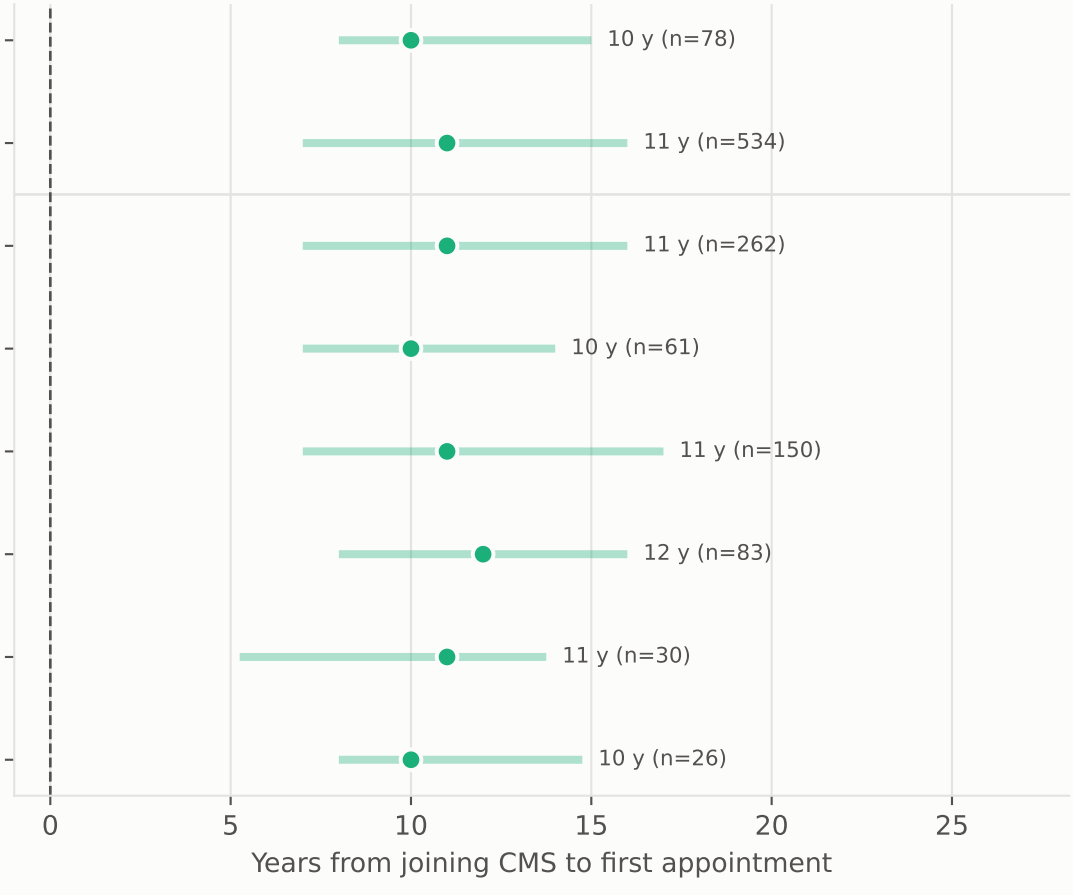

First L2 role - years since PhD

First L3 role - years since joining CMS

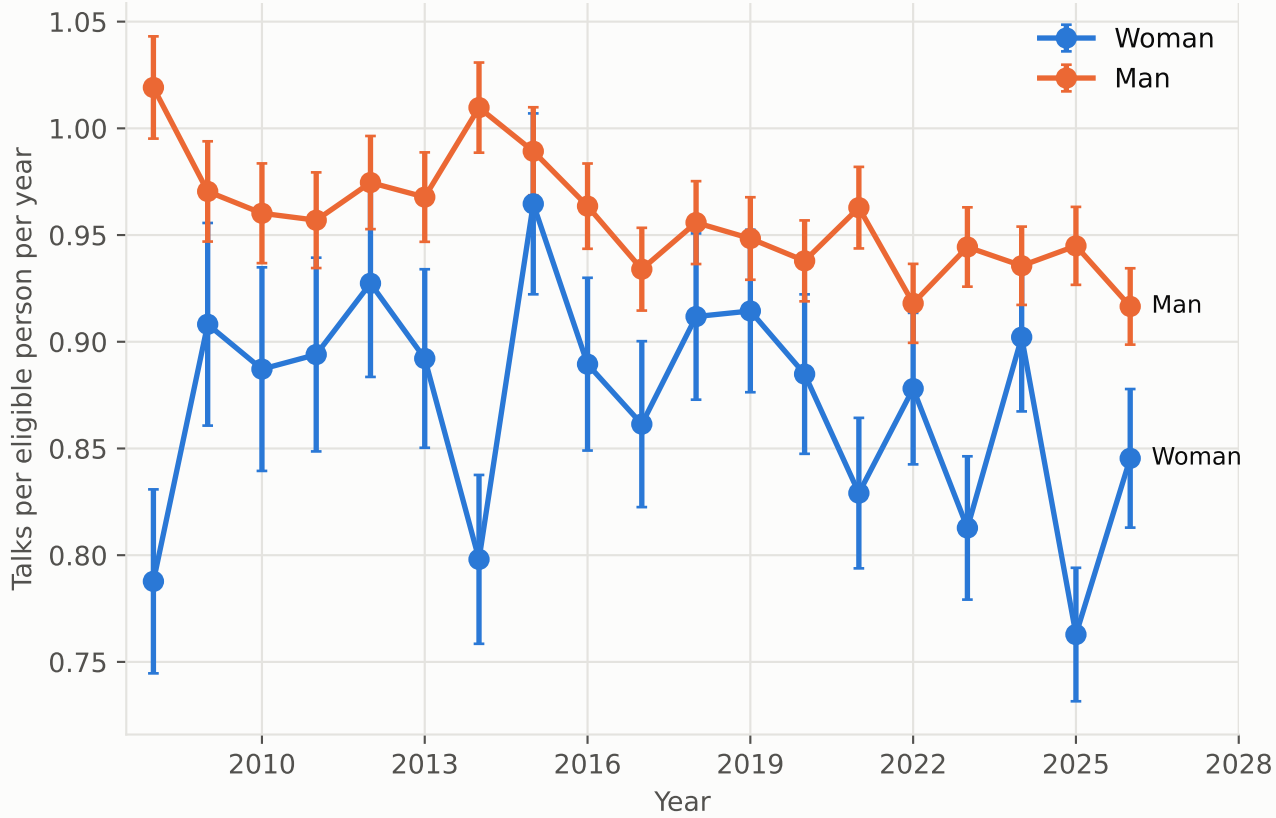

First L2 role - years since joining CMS

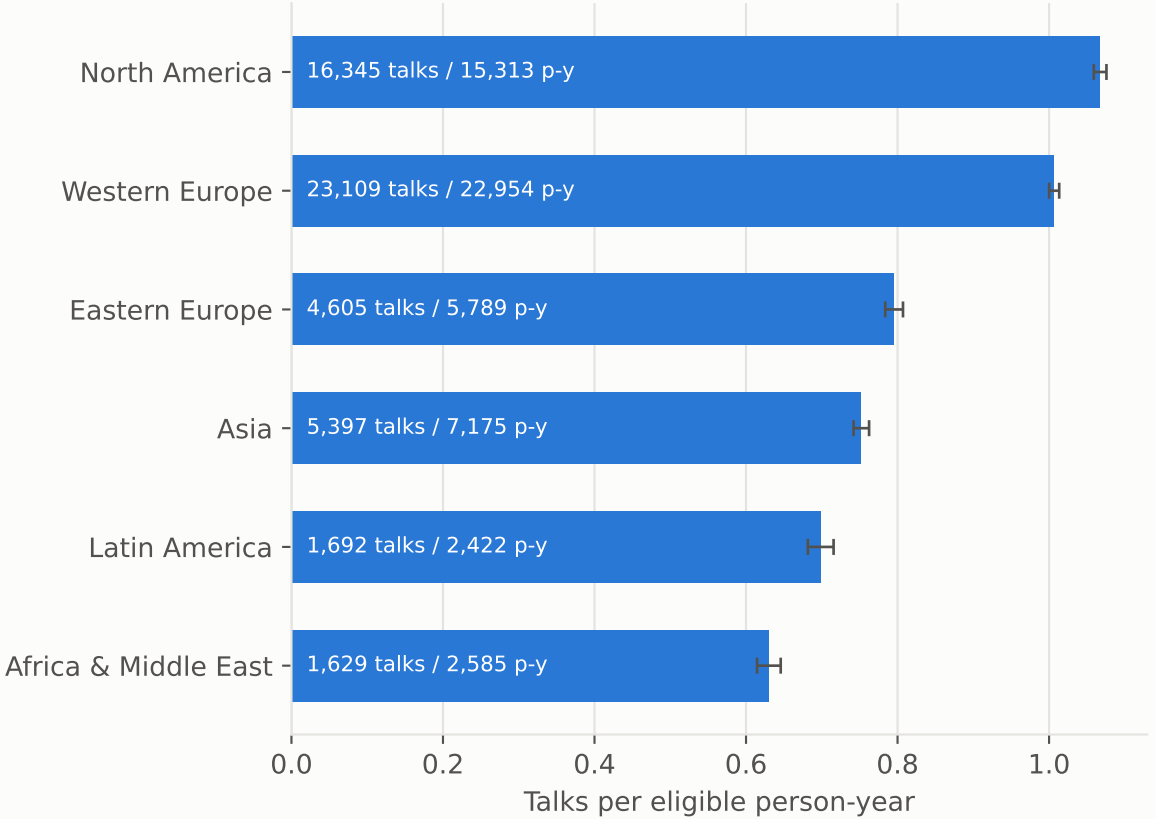

Dot = median, bar = interquartile range, n = people. Only first appointments inside the data window; never-appointed people are censored (a Kaplan-Meier curve would include them). PhD clock: people without a PhD year are left out; negative = appointed before the PhD. Joining clock: everyone.

FAKE DATA - illustration only

Talk allocation rate by gender

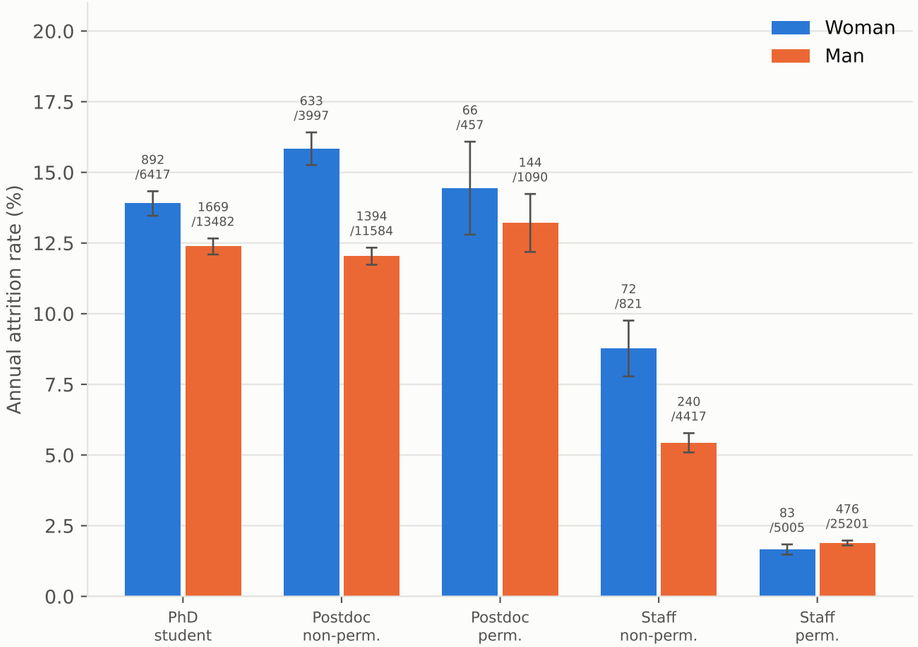

Talk allocation rate by institute region

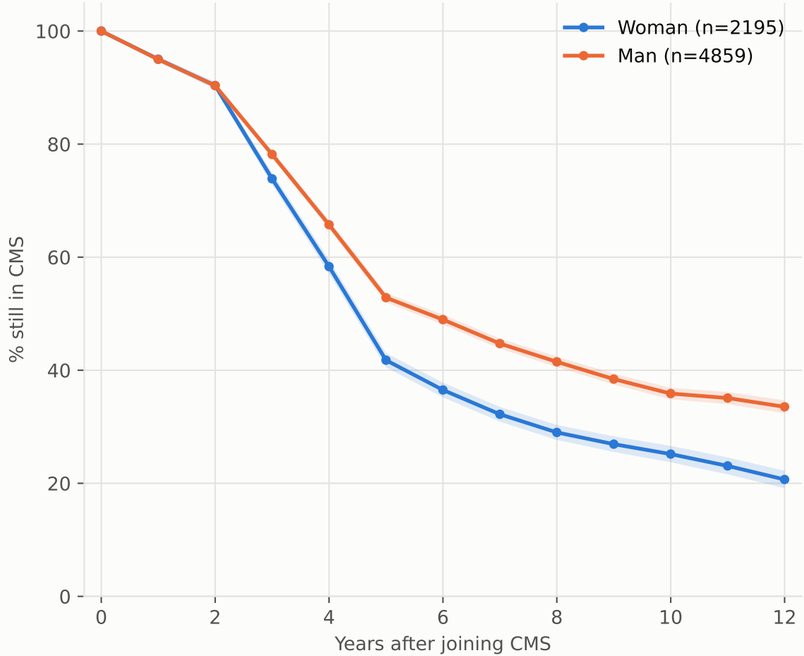

Eligible = Physicists (postdoc + staff). Region panel pools 2008-2026. Error bars: Poisson 1σ.

FAKE DATA - illustration only

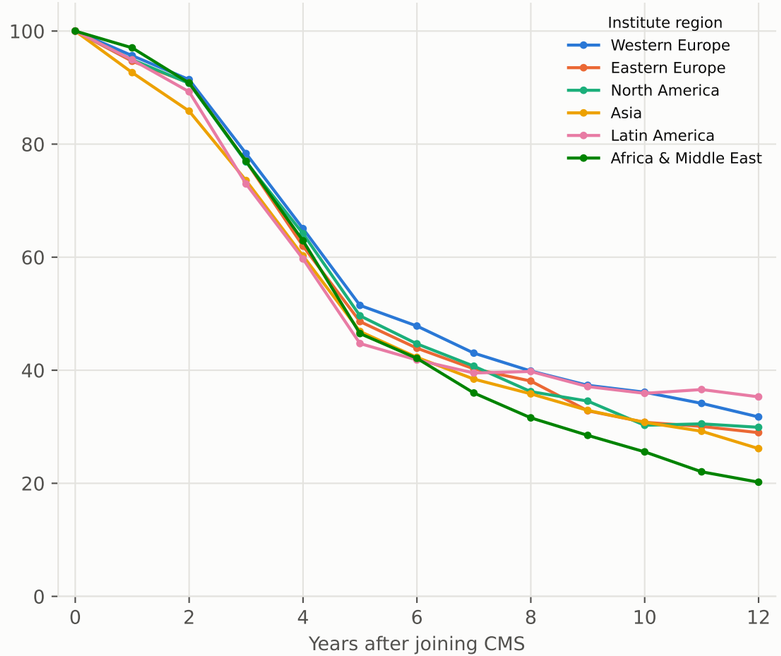

Where people leave: attrition by stage

General retention by gender

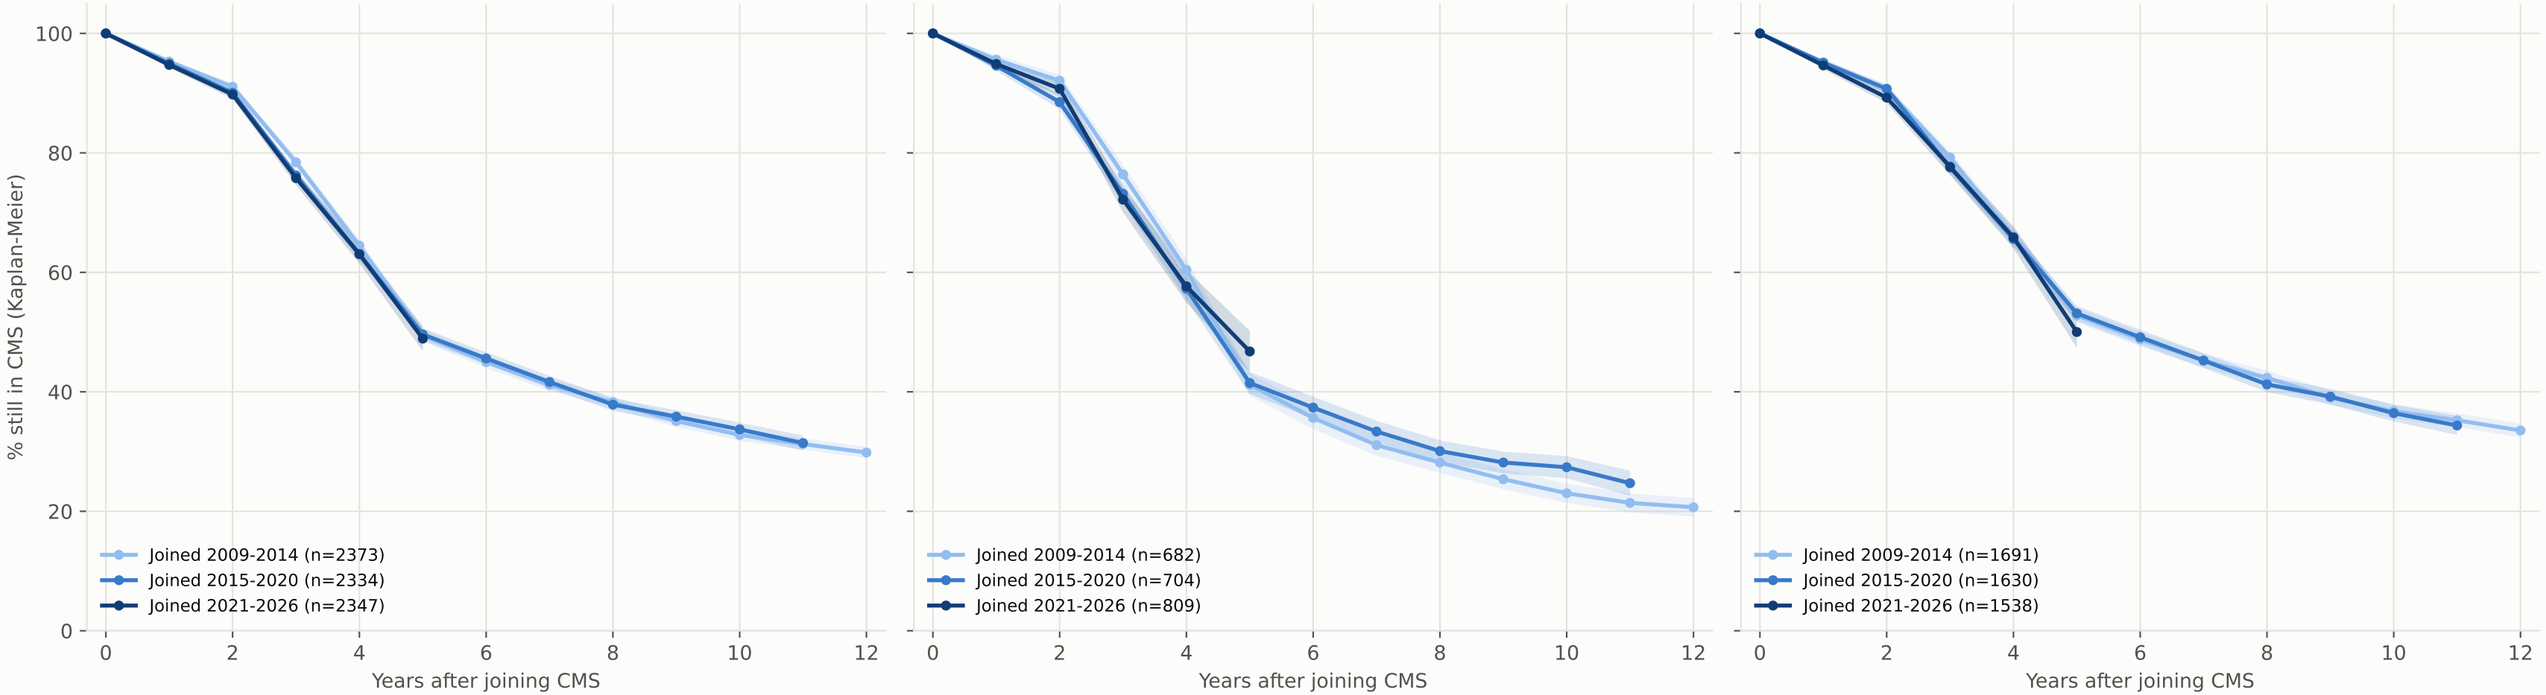

General retention by region

Left: left CMS during the year / active that year, 2008-2025; leavers / person-years printed; doctoral students leaving mid-PhD or at PhD completion included.
Middle, right: everyone who joined CMS 2009-2026, whatever the stage; only cohorts observable k years later. Bands / error bars: binomial 1σ.

FAKE DATA - illustration only

Kaplan-Meier: product of the yearly chances of staying, each using everyone who can be observed at that step, so recent joiners still count for their first years.
A newer period's curve stops where its cohorts cannot be followed further. Bands: 1σ (Greenwood). Darker = more recent joiners.
